

Entering a spectacle prescription

If you are not using the i-Clarity clinical records, then prescriptions for a patient are entered in the Rx area. If you are using clinical records, then a summery prescription will be automatically created in this form so that it can be viewed by the front of house team. You would also use this form to enter prescriptions from elsewhere.

Entering a New Prescription

Click on the Rx button

You will be presented with the summary Rx form. If this is the first time that a prescription has been entered for this patient, then you will be presented with a new, blank form; if the patient already has a prescription then you must click the New button to create a new Rx form.

After clicking the new button, the new prescription form needs to be completed.

The patients name will be automatically shown at the top of the form.

It will also automatically populate the test date with today's date.

🕖 Prescriptions	
Patient	Joan Thomas-Davis
Exam Date	12 May 2020 🗐 🗸

If you are entering a prescription from elsewhere you can click on the calendar icon next to the date and select the test date from the prescription brought in by the patient

Tick the Referred box if you are referring the patient to another health professional.

The Use For Recall box will be automatically ticked, untick this box if you do not want the new information you are adding to effect the current recall the patient is on. For example If you are entered a retest prescription.

If you are an Optometrist completing a new prescription, then the Optometrist field will be automatically populated with your name.

Optometrist	N/A	~

If you are completing a new prescription on behalf of an Optometrist, then you will need to click on the arrow next to the N/A selection and then select the correct optometrist name from the drop-down list.

If you are entering an outside Rx then you should leave the Optometrist selection as N/A

You can then fill out the prescription values, if this is not the first prescription for the patient then you will be able to compare the [prescription values against the previous prescription values which are displayed above.

Next complete any clinical notes about the current prescription/visit that may be of value to anyone viewing the computer prescription without the full paper clinical record. For example, Dry eye drops recommended.

Clinical Notes / Exam Outcome	
Dry Eye - Recommended Hyabak.	^
	\sim
Dispensing & Handover Notes	
Update specs, consider MAR this time	^
	 ~

Note anything discussed about new or updating spectacles in the handover notes section.

Select from the drop-down list at the top of the form the recall that is applicable to that patient.

Recall Scheme	N/A	~
Recall Scheme	24 months	~

The recall scheme can be left as N/A if the prescription is from elsewhere or it is a visit that does not require a recall e.g. recheck.

For patients who already have a prescription on the system then the recall scheme will automatically be completed with the recall scheme that was selected at the last exam and will only need to be amended if needed.

Recall Scheme	24 months	~
Туре	Private	~
Recommendati	No Change	~
Next Due Date	15 May 2022	

Selecting a Recall Scheme will automatically populate the Next Due Date.

The next due date will be displayed on the patient front screen along with a note of the recall scheme the patient is on. You can amend the next due date by clicking on the calendar icon. This will amend the date on this form and the patient front screen, but it will NOT amend the send date of the recall communication. This must be done in the communications tab of the patient record.

The type field will be automatically complete with either of the following 3 options,

Exam elsewhere – This is the default if you have the full clinical records module, because you should only be adding an outside Rx via this method, all prescriptions created in the practice should be entered in the clinical records module.

Private – This will be the default if the patient does not have a NHS reason selected on the front of their record.

NHS – This will be the default if the patient does have a NHS reason selected on the front of their record.

If the automatic default is not correct, then it can be amended by clicking on the arrow to show the drop-down list of other available options.

Then you can select a recommendation.

Recommendation	Unknown	\sim	

The available options for recommendation are.

Calling Back, CL Dispense, Dispense, Gone Elsewhere, Stable Rx, No Rx, Unknown, No Change.

If needed you can also record an early recall code against a prescription. Click on the select button next to the early recall code field.

Early Recall Code	NONE	Select	Remove

This will open another window that lists all the available codes. Click on the correct code and then click ok.

1 Patient is at risk of frequent changes of prescription for reasons not requiring medical referral or for reasons already known to a medical practitioner. 2 Patient had pathology likely to worsen, for example age-related macular degeneration, cataract, co dystrophy, or congenital anomalies. 3.1 Patient has presented with symptoms or concerns requiring ophthalmic investigation, resulting in ref to a medical practitioner. 3.2 Patient has presented with symptoms or concerns requiring ophthalmic investigation, resulting in iss a changed prescription. 3.3 Patient has presented with symptoms or concerns requiring ophthalmic investigation, resulting in eitt change or no referral. 4.1 Patient needing complex lenses. 4.2 With corrected vision of less than 6/60 in one eye 5.1 Patient has presented for a sight test at the request of a medical practitioner.
