

i-Clarity

Searching for an existing patient record

i-Clarity Version 3.3.2

To make an existing patient's record active search for the record and select it from the search results list.

The main search area is located at the bottom of the main i-Clarity screen.

1. You can type a patient's ID number into the ID field, the patient record allocated to this ID will be displayed in the search box to the right. If you double click on this line or press enter on your keyboard, the record will be displayed in the top section of the form and become active.
2. You can also type the patient's date of birth in the date of birth field, once you have entered the date of birth press enter on your keyboard to start the search, all patients with this date of birth will be displayed in the search results box. Double click on the patient record you would like to activate.
3. To search for a patient by name, you should type in either the male or female search fields. The patient's name should be typed in the following format: surname comma space first name.

As you type the name the possible options in the search results box will reduce. Again, if you double click on the patient record from the list in the results box it will become active.

It is the comma space that you type in the name field search box that signifies to the system you are switching the search from surname to first name.

You can use this comma space at any point when typing the name. For example, if you have a common, long, or difficult to spell surname you may wish to type only the first few letters of the surname followed by the comma space and then the first name.

For example: sm, jo

The system is searching for any patients whose surname begins sm and whose first name begins jo

You could also type the comma space into the name field first followed by the first name for example: , Mary.

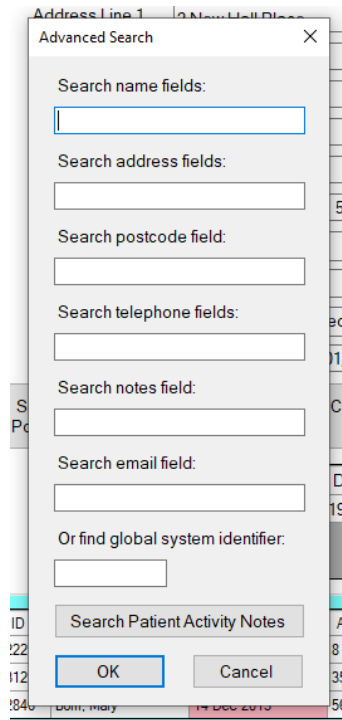

The system is now ignoring patient surnames and just searching for patient records with the first name Mary.

i-Clarity also has an advanced search facility. The button for this is located close to the centre of the main form.

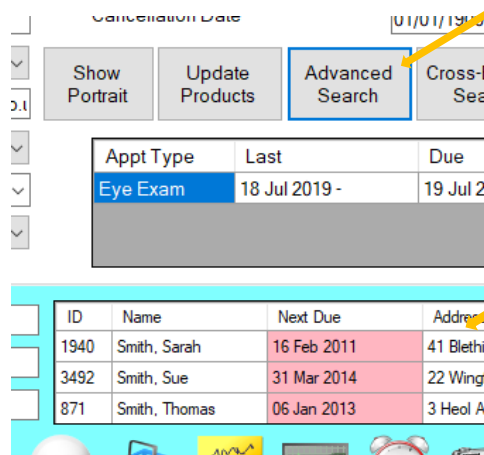

Clicking on this button opens the advanced search facility where you have other search fields such as phone or postcode.

Type the information you have in the relevant field of the advanced search window.

Then click ok.

The results from the search will be displayed in the search results box on the main form

Any of the search criteria typed into any of the fields of an advanced search will contain approximate matches, so if you typed the letter 'a' into the name field all records with the letter a anywhere in the name will be shown.

The one exception to this is the global system identifier which must be an exact match, so if the identifier were 12345, entering 12 would not bring up this record, only entering the exact match of 12345 would.

The name fields correspond to any matches that are found in either the forename or surname fields. For example, a search of 'jo'.

Results in the search grid will show patients that have a 'jo' included in either their forename or surname.

ID	Name	Last Specs Visit	Address 1	DOB	Canx.	^
118	Fondant, Joe		6 Viper Road	01-Jan-1972 (42)		
119	Green, Jo		45 Plain Close	01-Jan-1984 (30)		
120	Johnson, Derek		11 Aylesbury Drive	01-Jan-1990 (24)		▼

The address field corresponds to any matches found in Address line 1 – 5 on the patient record.

The postcode field corresponds to any matches found in the postcode field

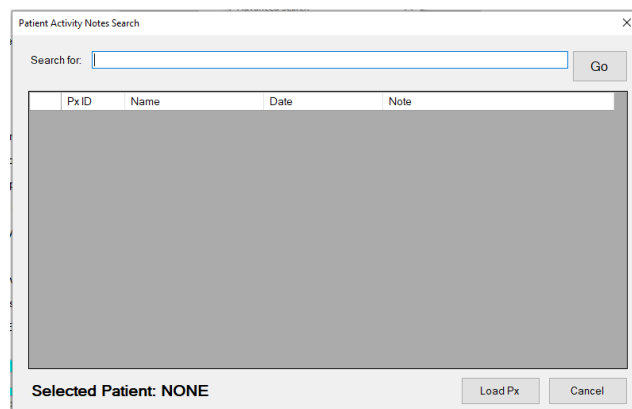

The telephone field corresponds to any matches found in the day, evening or mobile fields on the patient record.

The notes fields correspond to any matches in any text written in the notes box on the further details tab on the patient record.

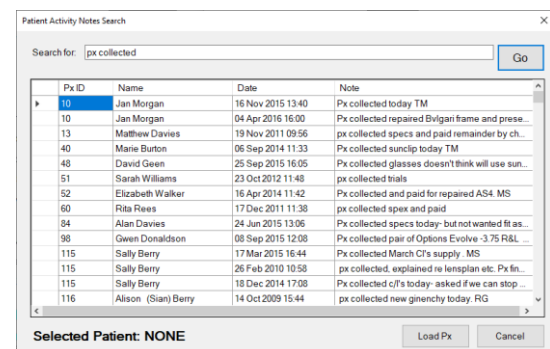

The email field corresponds to any matches found in the email field on the patient record.

The global system identifier field corresponds to an exact match found in the further details tab on the patient record.

Search patient activity notes will bring up a new window.

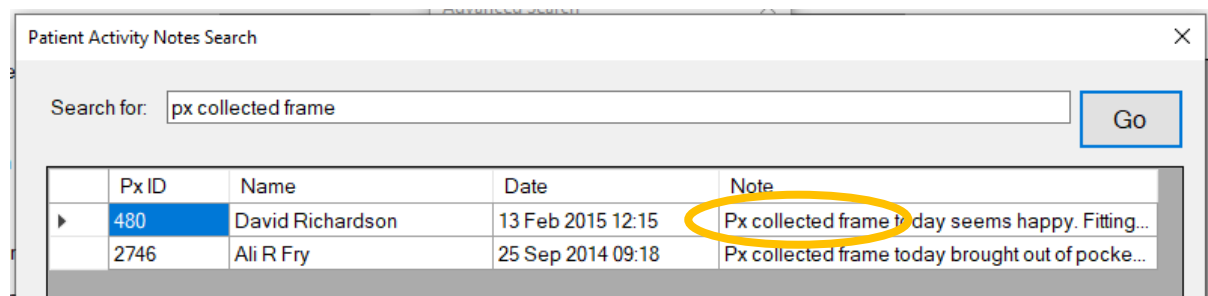

Text typed into the 'search for' field will be cross referenced against notes made in the patient activity section of the patient record. Clicking the GO button will display the results of the search in the grey field underneath.

If more than one word is typed into the 'search for' field, i-Clarity will search for that series of words.

For example, searching for 'Px collected frame' will display the following results.

It will not display the following record because the series of words searched did not match exactly.

10	Jan Morgan	04 Apr 2016 16:00	Px collected repaired Bvlgari frame and prese...

Select a patient to: Selected patient:

Double click on the patient record you are looking for.

This will populate the selected patient field with the patient's name.

Then click on one of the 3 options at the bottom of the window.

1. Log in to this Patient's Branch – i-Clarity will automatically log you in to the branch this patient's record is located at and will make that patient record the active patient.
2. Transfer this Patient to Another Branch – This will open a new window with a drop-down list of the available branches you could transfer the patient to.

This will transfer the patient record and advise you of the patient's new ID number in that branch.

3. Book this Patient an Appointment at their own Branch – This will open the appointment diary for the branch this patient record is located at. Once you have booked the appointment and closed the appointment diary you will be returned to the branch you were originally logged in to.
